

On devices Android 9+, the Bluetooth discovery doesn't display any headset.

It's necessary to activate the Location service for BT Pairing.

To enable the Location service:

Android 9

```
$ adb shell settings put secure location_providers_allowed +gps
```

Android 10+

```
$ adb shell settings put secure location_mode 3
```

To disable the Location service:

Android 9

```
$ adb shell settings put secure location_providers_allowed -gps
```

Android 10+

```
$ adb shell settings put secure location_mode 0
```

NOTE:

This process is performed automatically if BT Pairing is installed using the installation bat files of products such as TellNext.
