

SetDateTime App sets the date and the time on a ZEBRA device manually or automatically:

Manually:

If you run the APP, you can set the date and the time to whatever you choose.

Automatically:

If you run the .bat script, a file SetDate.txt will be generated and copied to the path /sdcard/ with the following format:

`+02:00 19/09/2019 13:53:13`

It is important that your PC has the date/time format set to DD/MM/AAAA, default for the French language.

As you run the .bat file, it will force the APP to read the file /sdcard/SetDate.txt and set the date accordingly... then, it will close down automatically.

NOTE:

Please note this is a simple app, you must make sure you install the application using the “-g” option with adb or set the correct permissions in Settings.
