

TellNext allows getting a configured log, with more or fewer details.

The configuration file is: `_tnx_log.jcf`

It allows us to generate a log, and/or change the log level with a configured hotkey.

```
{
  "On": true,
  "Format": "BASIC",
  "Output": "FILE",
  "Outputs": {
    "File": {
      "Path": ":PROFILE_DIR:/Log.txt",
      "SizeLimit": 1024,
      "KeptOpen": true,
      "AutoFlushed": true
    },
    "TcpServer": {
      "Host": "0.0.0.0",
      "Port": 7744
    }
  },
  "Preset": "Full",
  "Presets": [
    {
      ...
    }
  ]
}
```

Here we will find the Log.txt file into the profile directory.
