

It is possible to configure TellNext to send a DEL sequence (0x7F) when pressing the Backspace key.

In the sections:

Keyboard.EscapeSequences.VTXXX

Keyboard.EscapeSequences.ANSI

Change the behavior of the InternalCommand 104B (Backspace) as follows:

```
{  
    "Label": "FN_BKSP",  
    "InternalCommand": "104B",  
    "Data": "/08/20/08"  
}
```

Change by

```
{  
    "Label": "FN_BKSP",  
    "InternalCommand": "104B",  
    "Data": "/7F"  
}
```

The emulator will send DEL instead BS when pressing the BKSP key.
