

TellNext allows getting a configured log, with more or fewer details.

The configuration file is: _tnx_log.jcf

It allows us to generate a log, and/or change the log level with a configured hotkey.

```
{  
  "On": true,  
  "Format": "BASIC",  
  "Output": "FILE",  
  "Outputs": {  
    "File": {  
      "Path": ":PROFILE_DIR:/Log.txt",  
      "SizeLimit": 1024,  
      "KeptOpen": true,  
      "AutoFlushed": true  
    },  
    "TcpServer": {  
      "Host": "0.0.0.0",  
      "Port": 7744  
    }  
  },  
  "Preset": "Full",  
  "Presets": [  
    {  
      ...  
      ...  
    }  
  ]  
}
```

Here we will find the Log.txt file into the profile directory.
