

How to increment a ScreenTracker variable that is only string

Here we set and increment the ScreenTracker variable '#33', converting to number (using `tonumber( str )`) and back to string (using `tostring( num )`).

```
vars["#33"] = "5"  
Log.append( "Var 33 ini: "..vars["#33"] )  
local nTmp= tonumber( vars["#33"] ) + 1  
vars["#33"] = tostring( nTmp)  
Log.append( "Var 33 inc: "..vars["#33"] )
```

In the log file (`Log.txt`)t we should have the following lines:

```
EQ15KHTHN2, VXT_52_FR(n1), 2019-08-20 14:55:09, Script : "Var 33 ini: 5".  
...  
EQ15KHTHN2, VXT_52_FR(n1), 2019-08-20 14:55:09, Script : "Var 33 inc: 6".
```
